

Muhammad Maaz Sultan

Software Developer | Web Development | Automation | AI Engineering

Lahore, Pakistan • maazsultan1.00@gmail.com • github.com/muhammadmaazsultan0300-collab • linkedin.com/in/muhammad-maaz-sultan

PROFILE

AI Engineering student and developer who builds modern software and intelligent AI-powered solutions. Comfortable across the stack — from front-end interfaces to backend logic and data — with hands-on project experience spanning business websites, internal software tools, and an AI-driven assistant. Focused on turning real-world problems into practical, working systems, with a growing specialization in AI engineering and automation.

EDUCATION

BSc (Hons) Artificial Intelligence

In progress

Department of Artificial Intelligence, University of Engineering & Technology (UET), Lahore

AREAS OF FOCUS

- Python Development
- Web Development
- Software Engineering
- AI & Machine Learning
- Database Development
- API Integration

TECHNOLOGIES

Python, JavaScript, HTML, CSS, C, SQL, Git/GitHub, REST APIs, FastAPI, Streamlit, Machine Learning, AI / LLM technologies.

PROJECTS

Restaurant Website

HTML, CSS, JavaScript

A full website built for a restaurant, covering the menu, restaurant information, and a clean, ordering-focused layout.

Cafe Website

HTML, CSS, JavaScript

A website for a cafe presenting the menu, atmosphere, and location details in a warm, simple layout.

E-commerce Landing Page

HTML, CSS, JavaScript

A conversion-focused landing page for an e-commerce store, with clear product presentation and calls to action.

Task Manager

Python, Database, REST APIs

A task management application that assigns and tracks tasks for people across different departments and fields.

Weather Dashboard

Python, REST APIs

A dashboard that pulls live weather data and presents current conditions and forecasts in a clean interface.

Hospital Management System

C

A Hospital Management System built in C that manages hospital and patient records efficiently — data storage, sorting, search by city, bed pricing, and record management through a user-friendly menu.

Jarvis AI Assistant

Python, AI / LLM Technologies

A voice-driven AI assistant that understands commands and helps handle everyday tasks.

CURRENT DIRECTION

Software Engineering → Advanced Automation → Machine Learning → AI Engineering

I'm deliberately building projects that stretch across each of these areas rather than staying comfortable in just one — the goal is a practical, well-rounded foundation before specializing further in AI engineering.
